

A photograph of a potato field at sunset. The sun is low on the horizon, casting a warm, golden glow over the scene. Rows of potato plants are visible, with their green leaves and stems. In the foreground, several rows of potatoes are shown in the soil, some partially covered. The soil is dark and rich. The overall atmosphere is peaceful and agricultural.

STAGOT

**INDIA'S FIRST
INTEGRATED POTATO
INGREDIENT SOLUTIONS COMPANY**

About Stagot

STAGOT is a purpose-driven agri-processing company built on the belief that true value begins at the source. **Established in 2015** in Palanpur, Banaskantha—one of India's most fertile potato-growing regions—STAGOT was founded to address a critical challenge faced by farmers: the lack of reliable markets for their produce.

What began as a response to agricultural distress has evolved into a globally benchmarked, fully automated manufacturing enterprise. STAGOT combines ethical sourcing, advanced processing, and long-term farmer partnerships to transform potatoes into high-value industrial solutions.

With a strong foundation in sustainability, traceability, and quality, the company operates at a scale of **90,000 metric tonnes of raw material annually**, supported by a network of over **1,000 farmers**. Today, STAGOT serves customers across **18+ countries**, positioning itself as a reliable global alternative to traditional starch suppliers.

At its core, STAGOT is not just a manufacturer—it is a platform that connects agriculture, technology, and global industry while uplifting the farming ecosystem.

Core Value

Farmer

We respect the origin of our products by building strong partnerships with farmers, ensuring sustainability, consistency, and shared growth.

Fair

From sourcing to final delivery, every process is transparent, ethical, and accountable ensuring trust across our entire value chain.

First

We believe in taking initiative-leading with action, innovation, and responsibility rather than waiting for change.

Focus

Quality is not a checkpoint-it is embedded in every stage of our operations, from raw material to final product.

Fit

We deliver solutions that are precisely aligned with customer needs-functionally, commercially, and operationally.

Manufacturing Excellence

Fully automated, global-standard production facility

Advanced quality control systems across all stages

Annual processing capacity of 90,000 metric tonnes of raw material

Native Potato Starch

Product Description

- ✔ High-Purity
- ✔ Neutral Taste
- ✔ Excellent Viscosity
- ✔ Clean-Label

Applications / Uses

Low Moisture Native Starch

(S6)

Product Description

- ✔ Low-Moisture
- ✔ Moisture-Sensitive Formulations
- ✔ Flowability
- ✔ Improved Shelf Life
- ✔ Consistency in Premix Systems

Applications / Uses

Modified Potato Starches

(E1410, E1412, E1420, E1422-Hot Swell)

Product Description

- ✔ Enhanced Functional Performance
- ✔ Heat Resistance
- ✔ Shear Stability
- ✔ Freeze-Thaw Stability

Applications / Uses

Frozen foods

Dairy desserts and cheese

Bakery

Snack systems and processed foods

Sauces and ready-to-eat meals

We Don't
Just **Process Potatoes,**
We **Engineer Possibilities**

Potato Flakes

Product Description

Potato Flakes are dehydrated potato products produced through controlled processing to retain natural taste, texture, and nutritional value. They offer convenience, consistency, and ease of use in large-scale food production.

Applications / Uses

Potato Granules

Product Description

Potato Granules are coarser dehydrated potato particles designed for applications requiring texture and structure. They provide excellent rehydration properties and contribute to product mouthfeel and stability.

Applications / Uses

Instant food mixes

Frozen food

Bakery

Snack pellet
production

Potato Fibre

Product Description

Potato Fibre is a natural dietary fibre derived from potatoes, offering both functional and nutritional benefits. It enhances water-binding capacity, improves texture, and supports clean-label, high-fibre product development.

Applications / Uses

Aqua Feed

Pet food

Animal Feed

Nutraceutical products

Potato Protein

(Protein contain 80%)

Product Description

Potato Protein is a high-quality, plant-based protein derived from potatoes. It supports sustainable nutrition and offers excellent amino acid balance, making it suitable for feed applications.

Applications / Uses

Animal feed

Functional nutrition solutions in feed

Aqua feed

Sustainable protein formulations in feed

Potato Pellets

Product Description

Potato pellets are produced from recovered potato streams, including off-grade French fries and processed potato materials, and are transformed into a high-carbohydrate, functional base suitable for extrusion and expansion. Designed for consistency and reliable performance, these pellets enable the development of innovative, grain-free applications, particularly in the pet food segment.

Applications / Uses

Grain-free pet
food formulations

Cattle feed
